

CASE STUDY

Goulston & Storrs law firm partners with Privva to manage security assessment process

WHAT WAS THE PROBLEM?

Goulston & Storrs was receiving a large number of audit requests from their clients. Third-party vendors hosting data in the cloud was expanding. Security resources were operating at full capacity.

WHAT HAPPENED NEXT?

Goulston turned to Privva to utilize their technology to be a force multiplier to manage security assessments throughout the value chain. Privva evaluated the security risks of the cloud-based vendors with their vendor risk management solution. Goulston and Privva utilized Privva AutoAssess™ and its machine learning technology to streamline responding to the high volume of client audits.

Goulston & Storrs PC
Boston, MA

Privva has become an extension of our security team, saving Goulston significant time in managing a critical function, and a priority at the firm.

John Arsneault—Chief Information Officer

THE RESULTS

- ✓ Goulston established a formalized vendor risk management program identifying and remediating potential risks of third-party vendors that have access to client data.
- ✓ Privva optimized a frustrating process and reduced time spent by over 90%, allowing Goulston security to focus on other critical priorities.
- ✓ The streamlined vendor assessment process has allowed the team to expand assessment beyond its most critical vendors resulting in a more secure environment for the firm.

Privva manages your vendor assessments and client security assessments.
